

I support the RM-10867 proposal by the ARRL. It is a balanced proposal that will simplify the licensing structure and offer new amateur radio operators a broader, more interesting, and more worthwhile experience. I believe it will allow both current technician-class, novices, and hams-to-be to become more experienced radio operators by allowing them access and opportunity to use a broader set of radio technology. This will improve both their knowledge and capabilities and also result in an increase in the number of active and well-trained amateur radio operators.

Thank you
Sincerely
Michael Polia
